The.1. Field of the Invention The present invention relates generally to a method and apparatus for providing concurrent access to a database. More particularly, the present invention provides a method and apparatus for providing concurrent access to a database when a plurality of client devices request access to the database. 2. Background Art It is well known to provide a database in a centralized or decentralized environment to store information. In one approach, a client, such as a laptop computer, is configured to communicate with a database, such as a LAN/WAN based database. In this approach, the database, which can include a relational database management system (RDBMS), can receive inputs from a client. The inputs can include information related to a purchase, a customer service request, a company product, a company personnel record, etc. With these types of database systems, it is known to provide multiple clients to communicate with the database at the same time. In this type of database system, the database maintains the information stored by the database. This information can include one 82157476a
